Birth

A staff walks into the Doctor Ort-Meyer's office, Ort-Meyer, relaxed, sitting in his chair like a boss, turns around to the staff, Ort-Meyer asks.

- Is the sample ready? - Dr. Ort-Meyer asks.

- No sir... - The Staff replied.

- Why? - Dr. Ort-Meyer asks.

- Because we need DNA of the best men... And we have no recruits, our... - Staff replied.

Doctor Ort-Meyer, without waiting for his staff to finish his sentence, he holds the red button on his desk microphone.

- Guards! Find me one of the most dangerous criminals from around the world... Every signle one of them needs to be an expert in meele, light, heavy weapons, they need to know martial arts, stealth, and precision, my clone has to be perfect! - Dr. Ort-Meyer says.

He releases his finger of the red button, and sits back in his chair, chill.

Few hours later, a black van arrives at the lab mansion, fully armed security with endoskeleton armor underneath leads 10 the worlds most dangerous criminals ever, they all enter titanium and plutanium base cells, they give their blood sample to a bottle, later they were collected, 10 minutes later, after the check, those samples were bringed by the staff to Doctor Ort-Meyer's office.

- Sir, we have it. - Staff says.

- The blood samples? - Dr. Ort-Meyer asks, relaxed, curious, but friendly.

- Yes sir! - The staff replied.

- Give it to me. - The staff hands over the 10 blood samples to Doctor Ort-Meyer.

Doctor Ort-Meyer leaves his office, he walks along with his staff throughout the corridor, the staff asks.

- Doctor Ort-Meyer, may I ask why exatcly do you need these 10 blood samples? We have enough clones, they're already trained for tasks!

- All of them are worthless... A single clone of what we currently have, would lose in a gun fight against a cowboy in a second! They're useless unless they're in groups! - Dr. Ort-Meyer replied.

They finally entered the cloning lab room, half naked male clones in liquid filled capsules in some corners, Doctor Ort-Meyer approaches an empty capsule with his staff, Ort-Meyer injects his clones along shared DNA blood sample into the cloning device to create the same face, and injects 10 seperate blood samples from the criminals, Ort-Meyer tells to the staff.

- Bring our programmer, now!

After 15 seconds, the programmer arrived, he starts coding and modifying Doctor Ort-Meyer's new clone DNA.

```
                    Terminal Accesed.
Iclude specimen & ctrlcsys % sctrl
art_def(Clone-System=1):
  Int AOOSWA24199(A;B;C;D;E;F;G;H;T;J;I) == Import
  ctrlcsys al - @tweri (Import) = ef
   ef[alpha] - 4321Q ea- ha- a- s'
  sctrl(Import) = True
.run
```

After the compiling was finished, the cloning process began, Doctor Ort-Meyer says.

- Well... It'll take 24 hours, let's go.

At midnight, Doctor Ort-Meyer sneaks into the lab, he checked on the cloning, half of the body is finished, suddenly, a security guard finds him and asks.

- Mr. Ort-Meyer, it's very late, what are you doing here?

- Watching my new son's birth. - Dr. Ort-Meyer replied.

Next day, staff prepares a medical bed with straps and sheet, Ort-Meyer walks into the lab with the staff who're pushing the medical bed to the room, a scientist pulls a level and the liquid slowly leaves the new clone capsule, the capsule is opened verticaly, the staff carry the clone's body onto the medical bed, they dress it in patient's robe, and tie up the clone with medical straps, Doctor Ort-Meyer says.

- Wait! He needs a barcode for identification!

A staff quickly tatoos a barcode with digits 640509-040147, and the clone was taken to an empty assylum room, the door was locked, and the clone was left alone in his cell, in the training section basement, where his missions and tasks will begin from soon.

Doctor Ort-Meyer watches his new son throughout the camera's screens in his secret room, he dials up 1-999-882-768 and says.

- 4th sector 1st 47th subject just needs to have a quick training and he'll be prepared, creation finished at 1964 May 9th, this should be enough information.

He hangs up.
